

ASSET TRACKING SYSTEM[®]

BGIL
Converging intelligence

To prevent theft of your organization's assets, our Integrated Asset Tracking system[®] is designed to help stop persons leaving with valuables they are not authorized to remove from the premises.

Our fully integrated database will link individual assets with their owners and maintain a complete database of both the protected valuables and their assigned owners.

Once our system knows to whom individual items belong to, it is then able to notify authorities of an attempted theft and if needed to lock down doors to prevent an asset leaving the premises.

Asset Tracking will work just as well to make sure that only an authorized driver can take a designated vehicle out of a garage or a parking lot.

- Laptop Tracking & Container Tracking
- Video Verification & DVR Integration
- Asset & Owner Images made & displayed
- Easy Audit & Inventory
- Comprehensive monitoring & reporting
- Pictorial Representation
- Real-time operation
- Active/ Passive Tags
- Live location display
- Very Fast Response

Asset Tracking System[®] operates by detecting the tag attached to an asset and requiring the use of a card or another security credential to authorize the removal of this item from the premises.

Asset Tracking function can be easily be implemented in small, medium or large assets locations without the need for an additional panels and controllers.

Full video integration can be used for an additional visual verification as well as a easily assessable record of the events.
